

My husband and I are over-the-road Truck drivers who deliver goods from the West coast to the east coast. Trying to find a local radio station when driving is very distracting. Additionally, when listening to a local radio station, we only get local weather and traffic.

Due to our proffession of delivering food and products to this great nations citizens, XM radio is a valuable tool. We can avoid bad weather, or plan our trip accordingly.

The traffic information is very important. With local radio stations, you only find out about the traffic congestion after you are setting in a traffic jam. With XM, we know of accidents early enough to avoid the problem area.

I have called my congresswoman and asked her to oppose HR 4026 Thank you for your time regarding this matter.
